## FREE FREIGHT

Conditions Apply

(See Sale Details page 4)

## 5% REBATE

To outside agents

(conditions apply refer page 4)

## OUR GUARANTEE

### BULLS

All Alpine & Welcome Swallow bulls are guaranteed for up to three years from the date of sale. Every effort has been made to ensure our bulls leave Alpine in top working order. However should any Alpine or Welcome Swallow bull prove to be infertile or incapable of service we undertake to:

1. Replace the bull with one which all parties agree is a satisfactory substitute, or
2. Issue a refund equal to the purchase price less the salvage value and is calculated on the basis that the amount is reduced by one third for each year of service from the date of sale. The guarantee covers the purchase value of the bull, without interest, cost and damages. The guarantee shall apply providing the bull's incapacity is not caused by injury or disease contracted since leaving Alpine. A veterinary certificate must be supplied by the purchaser upon request.

### GENETIC CONDITIONS

All Sale Bulls offered whose pedigree indicates a possibility of being a Carrier for AM, NH, CA or DD have or are currently being tested. The gene status is clearly marked next to the heading for each Lot. Test results for all sale bulls will be available on Sale Day.

### MN STATUS

MN Status will be clearly noted for each Lot at the end of the comments section.

- The Alpine Angus herd has MN3 status in the National Johnnes program.
- The Welcome Swallow herd has MN2 status in the National Johnne's program.
- Welcome Swallow Bulls starting from K700 are from a co-operator herd & will have MN1 status.

# SALE INFORMATION

## CATERING

Morning tea and a delicious beef lunch will be provided on Sale Day.

## PRE SALE INSPECTION

Private inspections prior to sale day by appointment are welcomed. Bulls will be yarded for inspection by 10am Sale Day Wednesday 30 March.

## OUTSIDE AGENT REBATE FOR BULL SALE

A 5% Rebate will be paid ONLY to those outside agents who ACCOMPANY buyers to the sale OR to those who INTRODUCE BUYERS IN WRITING 24 hours prior to the sale.

A 2% Rebate will be paid to Agents who handle the sale transaction only.

## GST

All bulls are sold GST exclusive.

## TRANSFER OF REGISTRATION

Clients wishing to transfer ownership of bulls purchased on the Angus register need to provide their Angus Society Prefix when registering on sale day.

## FREE FREIGHT & DELIVERY

The purchase price paid for both Alpine & Welcome Swallow Bulls includes free delivery by Alpine Angus up to 250km by road from the Alpine Sales Complex. Please note delivery will take place within 2 weeks of sale day. Buyer co-operation in co-ordinating delivery is greatly appreciated.

A freight charge of \$150 per bull purchased will apply to deliveries greater than 250km from Alpine. Please note those buyers wishing to collect their bull(s) themselves on sale day are eligible to a \$50 rebate.

## OUR QUALITY ASSURANCE

All Alpine & Welcome Swallow Bulls must complete the following before being deemed suitable to be offered for sale:

- A semen quality test.
- Independent structural assessment. Alpine Angus Bulls assessed by Ian Moreland from Studcare Genetics. Welcome Swallow Bulls assessed by Jim Green from Beef Class Structural Assessment system (see page 5 for further details).
- Performance recorded HBR or APR with Angus Breedplan.
- 7 in 1 vaccination (2 initial and then annually).
- Vibrio vaccination (2 initial and then annually).
- Sale bulls drenched just prior to sale day – please refer to the NVD.
- Pestvirus earnotch test negative PI plus Pestiguard vaccination (2 initial and then annually).

## DISCLAIMER

Whilst all care and attention has been paid to accuracy in the compilation of this catalogue, neither the vendors, selling agents or representatives thereof assume any responsibility whatsoever for the correctness, use or interpretation of the information on animals included in this sale catalogue.

m 0428 444 227

## WELCOME SWALLOW FLIES TO ALPINE

*Left to Right: Jim & Suzy Martin (Welcome Swallow); Jim Delany & Chris Oswin (Alpine Angus)*

The 'Flight' of the Swallow to Alpine will commence with the combined Alpine Angus/Welcome Swallow Autumn Bull Sale at the Alpine Angus Sale Complex at Rosewhite on Wednesday 30 March commencing at 1pm. The offering of over 120 HBR & APR Angus PLUS 5 REG Charolais Bulls promises Beef producers, "Double the Bull Power, Double the Choice and Double the After Sales Service!"

The merger of the Alpine and Welcome Swallow programs has been proceeding smoothly. A new Logo has been developed to reflect the merger and now the catalogue format has also been updated.

As a result of the merger a very strong team has assembled at Alpine Angus. For Alpine clients it is business as usual with Alpine Manager Chris Oswin & Tim Brown being the main points of contact. Jim and Suzy continue to service their Welcome Swallow clients as per usual whilst also assisting Alpine with marketing and genetic development.

To accommodate the expansion of the Alpine Angus herd, Alpine leased additional land near Benalla. This property is managed by Libby Skilbeck, well known for her previous Angus stud experience, who looks

after the Alpine cattle to be grown out on that property and is also involved in livestock activities at Alpine.

The merger has involved close co-operation by all of the team these past six months across all the many and varied activities needed to manage a seedstock enterprise – from communicating with clients to washing bulls to deciding matings and developing marketing strategies and so the list goes on! Jim and I have really enjoyed the past six months – you can always have a laugh with Jim D and Chris and working with them is really easy! We feel so fortunate to be able to continue our involvement in the Angus industry in this way!

Alpine and Welcome Swallow share a determination to keep looking for outcross genetics that have great performance, structure, temperament & female production efficiency.

This is well reflected by the Sires represented in this sale which include Connealy Earnen, KC Haas GPS, LCC New Standard, KM Broken Bow, Milwillah Gatsby, Booroomooka Frankel F510, Coonamble Gazza, Largo Full House, Carabar Docklands, Te Mania Gaskin & A A R TEN X.

For this sale well over half of the line up are at or below average for birth with many having a huge growth spread – the AVERAGE 200 & 400 Day weights for the sale bulls being in the TOP 15% of the Angus Breed! In other words the Bulls on offer are much more than heifer bulls! There are also many very powerful individuals in the line-up designed to join with mature cows and add power and efficiency to your female herd with the focus always being on the 2 key profit-drivers for any beef producer – namely the number of live calves and the KG/Beef grown per HA!

Alpine and Welcome Swallow also share a passion for breeding easy doing bulls with excellent phenotypes – with shape and fleshing ability. Bulls must be easy going – poor temperament is just NOT tolerated!

We look forward to seeing you all on Sale Day!! So come fly to Alpine – you will not be disappointed.

**Jim Delany**  
**Chris Oswin**  
**Jim & Suzy Martin**

## SUMMARY OF ANGUS EBVs & \$ INDEX VALUES

The following is a brief description of EBVs and \$Index values and Accuracies.

**Accuracy (%)** – Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal (or its progeny, or relatives) then the accuracy of its EBVs for particular traits will increase. See Understanding Accuracies for a more detailed explanation.

**Calving Ease DIR (%)** – Estimates of the genetic differences between animals in the ability of their calves from 2 year old heifers to be delivered without assistance.

**Calving Ease DTRS (%)** – Estimates of the genetic differences between animals in the ability of their 2 year old daughters to calve without assistance.

**Gestation Length (Days)** – Estimates of the genetic differences between animals in the number of days from the date of conception to the calf birth date.

**Birth Wt (kg)** – Estimates of the genetic differences between animals in calf birth weight.

**200-Day Wt (kg)** – Estimates of the genetic differences between animals in liveweight at 200 days of age.

**400-Day Wt (kg)** – Estimates of the genetic differences between animals in liveweight at 400 days of age.

**600-Day Wt (kg)** – Estimates of the genetic differences between animals in liveweight at 600 days of age.

**Mature Cow Weight (kg)** – Estimates of the genetic differences between animals in cow weight at 5 years of age.

**Milk (kg)** – Estimates of the genetic differences between animals in milk production, expressed as variation in 200-day weight of daughter's calves.

**Scrotal Size (cm)** – Estimates of the genetic differences between animals in scrotal circumference at 400 days of age.

**Days to Calving** – Estimates of the genetic differences in female fertility, expressed as the number of days from the start of the joining period until subsequent calving.

**Carcase Weight (kg)** – Estimates of the genetic differences between animals in carcase weight, adjusted to 650 days of age.

**Eye Muscle Area (cm<sup>2</sup>)** – Estimates of the genetic differences between animals in eye muscle area at the 12/13th rib site, in a 300kg carcase.

**Rib Fat (mm)** – Estimates of the genetic differences between animals in fat depth at the 12/13th rib site, in a 300 kg carcase.

**Rump Fat (mm)** – Estimates of the genetic differences between animals in fat depth at the P8 rump site, in a 300kg carcase.

**Retail Beef Yield % (RBY%)** – Estimates of the genetic differences between animals in percentage retail beef yield, in a 300kg carcase.

**Intra-Muscular Fat % (IMF%)** – Estimates of the genetic differences between animals in percentage intra-muscular fat (marbling) at the 12/13th rib site, in a 300 kg carcase.

**Trial Net Feed Intake (NFI)** – Estimates of the genetic differences in feed intake for animals adjusted to the same growth rate and weight base.

Following a review last year a whole suite of new Selection Indexes were introduced with the December 2014 Group Breedplan run. The objective with the new Indexes was to bring them into line with the changes in cattle markets over time.

**Angus Breeding Index** – estimates the genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls.

This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.

The Angus Breeding Index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.

**Domestic Index** – estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are assumed to be finished using either grass, grass supplemented by grain or grain (eg. 50 – 70 days) with steers slaughtered at 490 kg live weight (270 kg carcase weight with 12 mm P8 fat depth) at 16 months of age. Daughters are retained for breeding and therefore maternal traits are of importance. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.

**Heavy Grain Index** – estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.

Steers are assumed to be slaughtered at 760 kg live weight (420 kg carcase weight with 30 mm P8 fat depth) at 24 months of age. Daughters are retained for breeding and therefore maternal traits are of importance. There is a significant premium for steers that exhibit superior marbling.

**Heavy Grass Index** – estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.

Steers are assumed to be slaughtered at 620 kg live weight (340 kg carcase weight with 12 mm P8 fat depth) at 22 months of age. Daughters are retained for breeding and therefore maternal traits are of importance. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.

# ANGUS PERCENTILES & \$ INDEX WEIGHTINGS

## Angus Group Breedplan EBV Percentile Bands for animals born in 2014

Use this table as a guide to compare individual animals with the current genetic level of the Angus breed

Percentile Band	Calving Ease Dir (%)	Calving Ease Dtrs (%)	Gestation Length (days)	Birth Wt. (kg)	200 Day Wt. (kg)	400 Day Wt. (kg)	600 Day Wt. (kg)	Mat. Cow Wt. (kg)	Milk (kg)	Scrotal Size (cm)	Days to Calving (days)	Carcase Wt. (kg)	Eye Muscle Area (sq.cm)	Rib Fat (mm)	Rump Fat (mm)	Retail Beef Yield (%)	IMF (%)	Angus Breeding Index	Domestic Index	Heavy Grain Index	Heavy Grass Index

## Summary of \$ Index EBV Weightings

	Angus Breeding Index	Domestic Index	Heavy Grain Index	Heavy Grass Index
Calving Ease Dir.	10%	15%	9%	12%
Calving Ease Mat.	5%	7%	5%	6%
Birth Weight	-1%	-1%	0%	-2%
Mil	-3%	-3%	-3%	-3%
200 Day Growth	-4%	-2%	-6%	-3%
400 Day Growth	3%	19%	3%	3%
600 Day Growth	19%	1%	18%	21%
Intramuscular Fat	11%	9%	16%	7%
Days to Calving	-19%	-12%	-20%	-14%
Scrotal Size	0%	0%	0%	-1%
P8 Fat Depth	6%	6%	3%	8%
Eye Muscle Area	2%	2%	1%	3%
Retail Beef Yield	-4%	-6%	-2%	-7%

All selection Indexes are reported as an EBV, in units of relative earning capacity (\$) for a given production/market scenario. They reflect both the short term profit generated by a sire through the sale of his progeny, and the longer term profit generated by his daughters in a self replacing cow herd (where applicable). All selection index values have been derived using BreedObject technology.

For further information see the Angus website or contact staff at BREEDPLAN. Please note these weightings have been based on an analysis of the 13 profit drivers identified in beef production to meet the market specification identified.

## SUMMARY OF CHAROLAIS EBVs & \$ INDEX VALUES

**Calving Ease EBVs (%)** are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

**CE %Dir** = Direct Calving Ease – The EBV for direct calving ease indicates the influence of the sire on calving ease in pure-bred females calving at two years of age.

**CE %Daughters** = Daughters' Calving Ease – The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age. Gestation Length (Days) – Estimates of the genetic differences between animals in the number of days from the date of conception to the calf birth date.

**Birth Wt (kg)** – Estimates of the genetic differences between animals in calf birth weight.

**200-Day Wt (kg)** – Estimates of the genetic differences between animals in liveweight at 200 days of age.

**400-Day Wt (kg)** – Estimates of the genetic differences between animals in liveweight at 400 days of age.

**600-Day Wt (kg)** – Estimates of the genetic differences between animals in liveweight at 600 days of age.

**Mature Cow Weight (kg)** – Estimates of the genetic differences between animals in cow weight at 5 years of age.

**Milk (kg)** – Estimates of the genetic differences between animals in milk production, expressed as variation in 200-day weight of daughter's calves.

**Scrotal Size (cm)** – Estimates of the genetic differences between animals in scrotal circumference at 400 days of age.

**Carcase Weight (kg)** – Estimates of the genetic differences between animals in carcass weight, adjusted to 650 days of age.

**Eye Muscle Area (cm<sup>2</sup>)** – Estimates of the genetic differences between animals in eye muscle area at the 12/13th rib site, in a 300kg carcase.

**Rib Fat (mm)** – Estimates of the genetic differences between animals in fat depth at the 12/13th rib site, in a 300 kg carcase.

**Rump Fat (mm)** – Estimates of the genetic differences between animals in fat depth at the P8 rump site, in a 300kg carcase.

**Retail Beef Yield % (RBY%)** – Estimates of the genetic differences between animals in percentage retail beef yield, in a 300kg carcase.

**Intra-Muscular Fat % (IMF%)** – Estimates of the genetic differences between animals in percentage intra-muscular fat (marbling) at the 12/13th rib site, in a 300 kg carcase.

### ACCURACY

**Accuracy (%)** is based on the amount of performance information available on the animal and its close relatives – particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease.

### SELECTION INDICES

The Index values are derived using BreedObject technology. More information is available from the BreedObject website.

**Domestic Index (\$)** – Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd with a British cow base (eg Angus) targeting grass-finished production for the domestic trade. This Index assumes pasture grown & finished steers weighing 430 kg (240 kg HSCW and 6 mm P8 fat depth) at 12 months. Daughters are retained or sold for breeding therefore maternal traits are of importance. In response to industry feedback, positive emphasis has been placed on finishing ability.

**Export Index (\$)** – Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd with a British cow base (eg Angus) targeting the production of steers for export markets. This Index assumes pasture grown & finished steers weighing 700 kg (380 kg HSCW and 9 mm P8 fat depth) at 29 months. Daughters are retained or sold for breeding therefore maternal traits are of importance. In response to industry feedback, positive emphasis has been placed on finishing ability.

**Northern Terminal Index (\$)** – Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (eg Brahman cows) targeting the production of steers and heifers for the live export markets (eg Indonesia). This Index assumes that animals are sold at 400 kg to the boat trade and subsequently fed for 100 days at point of destination before slaughter at 550 kg (300 kg HSCW) at 24 months. All progeny are slaughtered.

Note that \$Index values for individual animals are sensitive to the assumptions used in the BreedObject analysis to calculate the selection index. Please refer to the information provided on the next page on the weightings used in the Charolais Selection Indices.

For further information please contact the Charolais Society or Charolais BREEDPLAN.

# BEEF CLASS STRUCTURAL ASSESSMENT

## HOW TO USE THE BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

The 2016 'The Swallow Flies to Alpine Autumn Bull Sale' Bulls were independently structurally assessed in December 2015.

Alpine Sale Bulls were assessed by Ian Moreland from Studcare Genetics

Welcome Swallow Bulls were assessed by Jim Green from Beef Xcell.

The Beef Class Assessment System uses a 1–9 scoring system for feet and leg structure;

- A score of 5 is ideal. (Note: Except for Temperament Score where score of 1 is preferable – refer notes below)
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs.
- A score of 2 or lower or 8 & higher are low scoring animals and are culled.

## HOW TO USE THE BEEF CLASS TEMPERAMENT SCORE

- A score of 1 is ideal.
- The score is evaluated as bulls leave the crush when being assessed for structure at approx 18 mths. This is not ideal as peer group behaviour in the yards can distort the result so in future these assessments will be made at weaning.

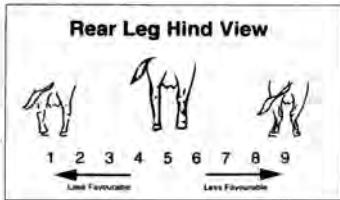

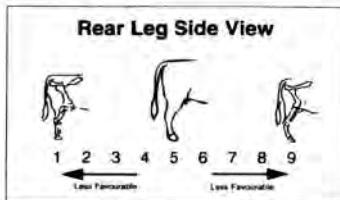

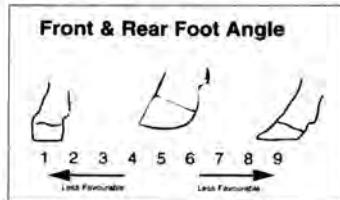

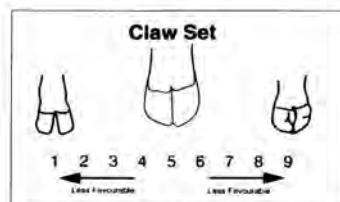

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry. The current trend for improving consistency and quality has shifted producers' focus, towards selecting seedstock on carcase and growth genetic traits (EBVs). Whilst, this selection has been, and will continue to be pivotal in developing the Australian beef industry, we must not forget the fundamentals of livestock breeding. The Independent Assessment System was designed by the MLA, the BIA and several breed societies to address structural problems in the beef industry. Detailed analysis of three thousand genetically linked herds indicated that structural characteristics such as leg and foot structure were moderately to highly heritable.

**Notes:** Talk about breeding females then this is one pretty interesting bull. One of the youngest bulls in the sale he is by VAR Reserve, a product of the Blackbird cow family. His dam, Little Meadows Edwinia has had daughters produce our top priced bulls and a son of hers is the grandsire of the one time Australian record priced bull Irelands Galaxy. Top 5% EMA, 10% Milk and 20% Growth and Carcase Wt.

# RODWELLS

## LOCAL SERVICE NATIONAL STRENGTH

## It's a trust thing

***Representative, negotiator, ally, and mate – this is a relationship business.***

At Rodwells we are known for our team of local, experienced, independent livestock specialists and property agents across Victoria, New South Wales and South Australia.

Backed by the strength of a national network, our Rodwells agents deliver the most effective solution tailored for your livestock. Our knowledge and experience in local markets and seasonality means that you can trust us to deliver the highest standard of service.

And as part of the Ruralco group of businesses, we are able to draw on the resources of Ruralco Property, providing real estate agency services in both rural and residential markets, as well as a comprehensive property management service.

Our agents have access to up-to-the-minute market intelligence, including market trends and performance statistics, and are committed to securing successful buying and selling results for their clients.

Whatever your livestock or property needs, we are confident our service offering provides the best possible outcomes at all levels of the industry supported by our ethos of Local Service, National Strength.

**Talk to your local Rodwells expert...**

**Give us a call for more information about our services and products**

IAN01320 S A VTEN SPEED 3022

## TEN SPEED

A A R Ten X 7008 S A x S A V Bismarck 5682 | Reg#: 17633563

~ Ten Speed combines a calving ease, high growth and high carcass EPD profile with the look of a true beef bull. He offers a pedigree that mates well on daughters of so many CRI sires – Chisum, Density, Excitement, Pioneer, Upward, Right Answer and many more. Utilize this bull's great genetics in herds that need a bump in multiple EPDs without sacrificing phenotype and maternal strength. His productive young dam by the cow maker Bismarck is a beautiful cow with a flawless udder.

# World Class Beef Genetics

## Bowmont Jackpot J310

Ardrossan Equator A241 X Vermilion Yellow Stone

- Bullet proof type, tremendous eye appeal, balanced EBVs and a first class pedigree
- A logical progression from A241 now that semen is very limited
- Near perfect independent structural assessment, excellent birth to 600D growth spread and breed leading scrotal and milk
- One look at his EBV graph and it is no surprise that Jackpot is one of A241's leading performance sons
- Dam is a product of Ardrossans sire producing Wilcoola cow family. She is a half sister to AI sires Ardrossan Connection X3 & X15.

## 7AN379 Deer Valley All In

AAR Tenx 7008 X Sitz Upward 307R

- Without question one the best Calving Ease sire now available in Australia
- No Ten X son matches All In's blend of CED, \$Weaning and \$Beef in the USA or Australia
- His powerful dam goes back to the Calving Ease and Marbling leader, GAR Objective 2345
- Use to improve virtually every EBV with no sacrifices in phenotype

## 7AN349 Plattemere Weigh Up

Sitz Upward 307R X GAR Retail Product

- Pedigree, Performance and Phenotype all wrapped in one unique package
- His Pathfinder dam serves as an elite donor for the Deer Valley program
- Progeny from Weigh Up and his dam were sale toppers in the 2014 Deer Valley Farms sale
- Weigh Up was an impressive individual on inspection in 2015 and his progeny were outstanding
- Sons of Weigh Up have been highly sought after in the USA to join the AI industry

## AFTER SALES SERVICE AND MANAGEMENT OF BULLS

**BUYING A BULL IS AN INVESTMENT. THIS INVESTMENT SHOULD CONTRIBUTE TO THE GENETICS AND SALE INCOME OF YOUR HERD FOR MANY YEARS. IF YOU ARE TO GET THE MOST FROM YOUR NEW BULL, IT PAYS TO LOOK AFTER HIM WELL, ESPECIALLY IN THE FIRST SEASON OF USE.**

Please remember, when working bulls through the yards, handle them with care. Preferably work them with other cattle and do not use force.

### OUR GUARANTEE

All Alpine & Welcome Swallow bulls are guaranteed for up to three years from the date of sale. Every effort has been made to ensure our bulls leave Alpine in top working order. However should any Welcome Swallow bull prove to be infertile or incapable of service we undertake to:

1. Replace the bull with one which all parties agree is a satisfactory substitute, or
2. Issue a refund equal to the purchase price less the salvage value and is calculated on the basis that the amount is reduced by one third for each year of service from the date of sale.

The guarantee covers the purchase value of the bull, without interest, cost and damages. The guarantee shall apply providing the bull's incapacity is not caused by injury or disease contracted since leaving Welcome Swallow. A veterinary certificate must be supplied by the purchaser upon request.

### AFTER SALES SERVICE

Our 3 year guarantee is designed to deliver the best quality assurance. The sale of a bull we regard as the beginning of a relationship with our clients rather than the end of a 'deal'. We also believe we have a vested interest in helping our clients breeding programs in any way we can.

If you have any problems with your bulls or any other aspect of your breeding program we invite you to make contact with us regarding your concerns as soon as possible. We endeavor to keep a supply of back up bulls at all times in order to meet our guarantee obligations and as a service to clients whose bulls are accidentally injured.

We also employ the services of Dr John Webb Ware & Lisa Warne from the Mackinnon Project based at Melbourne University Werribee campus who gives us veterinary advice and farm production advice as he does for many farming enterprises across Victoria. This means that if we do not have the answer we will call on outside expertise to assist you.

### ARRIVAL OF YOUR NEW BULL

Bulls can become upset and excited in the sale and delivery process. They are

subjected to strange yards, different noises, loss of their mates, different people, different handling methods, trucking, unloading, new paddocks and different water and feed. This can upset animals, which are normally very quiet.

When the bull arrives home, unload him at the yards into a group of house cows, steers or herd cows. Never jump the bull from the back of a truck into a paddock. Bulls from different origins should be put into separate yards with other cattle, steers or cows, for company.

Provide hay and water, and then leave the bull alone until the next day.

All bulls should be drenched for worms every six months with a dectin drench. In addition they may need a drench for fluke if necessary and to be treated for lice. The following annual vaccinations are recommended:

- 7-in-1 vaccine annually.
- vibriosis vaccine annually.
- Pestiguard vaccination annually.

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis is a sexually transmitted disease that causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. Vaccinated bulls are free from vibriosis so vaccinating bulls against the disease should be a routine practice. All Welcome Swallow bulls are vaccinated. Please refer to the health maintenance record on your certificate, which also recommends future health maintenance for your bull.

### MATING BULLS

For an efficient production system we recommend a 6-8 week joining season. Newly purchased young bulls should not be multiple joined with older herd bulls. They will not be allowed to work much and in keeping them away from the cows, the older, dominant bull will knock them around.

Use new bulls in either single sire groups or with other young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

Ensure all bulls used are in good condition prior to working—condition score 3 is ideal. Remember bulls that are too light or heavy in condition may have problems with libido and semen production.

Yearling bulls are still growing strongly, so tend to be leaner, carrying less body fat reserves. The condition of the yearling bulls is critical. If they drop below condition score 3, sperm production may be impaired.

Service Ability Testing is recommended on all bulls prior to joining.

All working bulls should be tested or checked before joining for physical soundness, testical tone and serving ability.

All bulls to be used must be free moving, active and in good store condition. Bulls may need supplementary feeding before the joining season to bring them up to condition score 3. The Australian Association of Cattle Veterinarians (AACV) defines a normal, fertile bull as 'expected to get 90% of 50 normal, cycling, disease free females pregnant within 9 weeks, and 60% of these should become pregnant in the first three weeks of joining'. This expectation would apply to 2 year old bulls, but not to younger bulls.

### DURING MATING

Whilst generally all goes to plan we believe a proactive approach is best to ensure you get the best result.

We strongly recommend that you keep a close eye on the bulls if possible when joining. Even though we have performed a service ability test and had your bulls independently structurally assessed bulls are animals and things can still go wrong. Check bulls at least twice each week during joining. Get up close to them and see each bull walk; check for swellings around the sheath and for lameness. Watch them work if possible. A significant number of cows or heifers bulling after 6 weeks of joining may indicate there is a problem. Young bulls are particularly vulnerable in their first season. Common problems that can occur are;

- they may not have built up immunity to IBR (the cattle form of herpes—making it painful to insert the penis).
- or may be more prone to a fever event through the stress of working, new surroundings and establishing their ranking with other bulls. This can render them temporarily infertile for a six week period.
- Problems such as warts on the penis will mean that the bull will need to be attended to.
- and pay particular attention to any sign of abnormal serving problems like 'corkscrew penis'.

Replace any suspect bull immediately. If you think there is or might be a problem please do not hesitate to contact us immediately as we can help you investigate the problem and if available provide a replacement bull so your joining is uninterrupted by any unforeseen event.

If you have to replace a bull, it is always wise to get the problem bull checked by your vet. Sometimes prompt treatment for small problems can avoid culling.

Our thanks to the Angus Society for their contribution to this article.

# TEXAS MOUNT K2

THE BEEF BREEDER'S BULL

Mount K2 was purchased at the Texas Angus Spring 2015 Bull Sale for \$45,000 (Texas record top price) by Glenoch Angus and Welcome Swallow Angus, with Texas retaining a 25% interest.

*"Alpine focus on using sires descended from dominant female lines, that are structurally sound and excel for calving ease growth spread, carcase, fertility and temperament – we selected Mount K2 for our 2015 joining because he excels across all of these traits. We were lucky enough to purchase a sire by the same dam two years ago and look forward to the influence these two bulls, and their damline, will have on our herd in years to come."*

– Alpine Angus manager Chris Oswin
